CLAUDE SKILLS · 18 OCT 2026

Claude is a genius new hire. Nobody gave it the playbook.

BY THE END

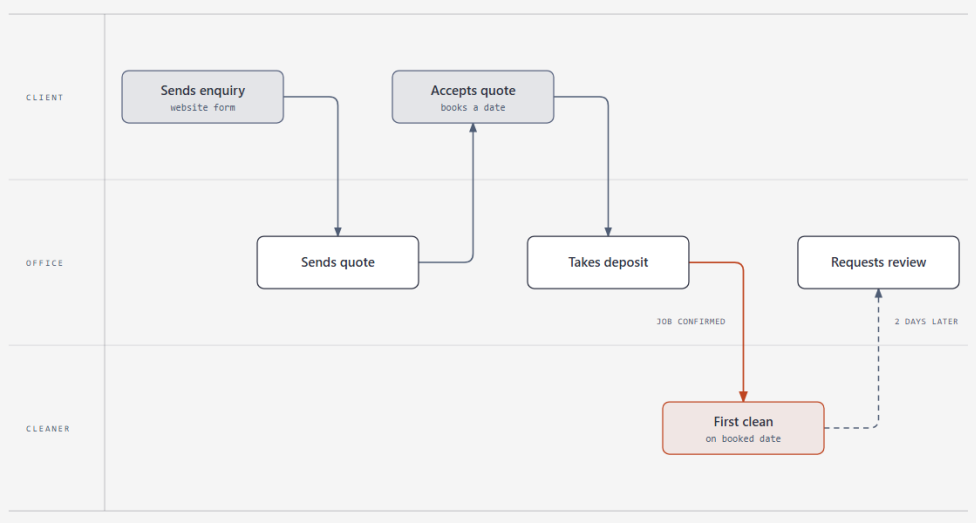

Ten free add-ons with over 800,000 GitHub stars between them: which to use today, which to skip. Then three gifts I built for you.

BEFORE · PLAIN CLAUDE

Asked in the chat: a text drawing.

AFTER · ONE FREE SKILL

With the skill: a clean diagram you can hand to your team.

THE IDEA IN ONE PICTURE

A skill is the playbook *you hand a new hire.*

DAY ONE

Smart, eager, no playbook

- Asks you how you like things done
- Guesses the format
- Different result every time

WITH THE PLAYBOOK

Does it your way, every time

- ✓ Follows written steps
- ✓ Knows the format
- ✓ Same quality on day 100

Skill	=	A written playbook Claude follows
Agent	=	A specialist you can call in
Repo	=	The free folder on GitHub where it lives

WHERE IT RUNS Most of these run in Claude Code, Anthropic's coding app. Each card says where it works.

TODAY'S TEN HIRES

Ten new roles. *All free.*

HIRE 01

The question asker

mattpocock/skills

HIRE 02

The staffing agency

agency-agents

HIRE 03

The project planner

agent-skills

HIRE 04

The memory

claude-mem

HIRE 05

The researcher

last30days-skill

HIRE 06

The process mapper

diagram-design

HIRE 07

The mystery shopper

playwright-cli

HIRE 08

The meter reader

codeburn

HIRE 09

The ads auditor

HIRE 10

The plain-talker

attention-span

HOW I PICKED THEM

Four checks *before anything got in.*

- **Real and current**
  The real repo, updated in the last few weeks
- **Free for business use**
  The licence lets you use it in your business
- **Read the code**
  Looked for anything that phones home or grabs logins
- **Ran it in a test folder**
  Or it says NOT TESTED, plainly

15

repos checked today.
10 made it.

SOURCE: my vetting notes, 18 Oct 2026

296,000 stars. *Three skills you'll use.*

HIRE 01 ✓ WE RAN IT

USE TODAY

THE QUESTION ASKER

`mattpocock/skills`

WORKS IN **Claude Code**

A free pack of Claude skills. Three are for business owners.

Why you'd care: Get the right answers from a client before the first meeting, without writing the form yourself.

296,071 stars · MIT licence · In Anthropic's official plugin list · Updated 13 Oct 2026

Watch out: Most of the pack is for coders. Install it, then use only these three.

MY TEST · 18 OCT

`/to-questionnaire`

Writes a questionnaire for a client

`/teach`

Builds lessons that build on each other

`/handoff`

Saves today's session for tomorrow

New Client Setup: Your Books & Payroll

1. The business itself

- What is the business's full legal name?
- Do you operate under any other name (a "doing business as" name)?

...

My test: a new-client questionnaire for a plumbing business's books and payroll. 68 questions in 8 sections, from a two-line brief.

Stars, licence and dates: GitHub, 18 Oct 2026

COPY THIS · THE QUESTION ASKER

Your client form, *written for you.*

YOUR PROMPT

HIRE 01

```
/to-questionnaire Who it's for: [a new client, e.g. a dental clinic owner]. What I need back: [everything I need before our first meeting].
```

TIP Send it before the call. You walk in already knowing the answers.

282 specialists. *Hire five.*

HIRE 02 ✓ WE RAN IT

TRY IT

THE STAFFING AGENCY

msitarzewski/agency-agents

WORKS IN Claude Code

A free library of ready-written specialists: sales coach, bookkeeper, ad strategist and more.

Why you'd care: Call in the right expert for the job instead of writing a long setup prompt every time.

161,142 stars · MIT licence · 282 agents counted · Text files only, no code runs

Watch out: Install only what you need and check any numbers they quote. Some push email tools you don't need on GoHighLevel.

MY TEST · 18 OCT

1 "What made you take this call now, what told you leads had dried up?"

2 "Roughly how many new patients a month were you getting a year ago, and how many now?"

3 "What changed around the time it dropped?"

4 "What have you already tried to fix it, and why didn't it work?"

5 "If new patient numbers stay where they are for the next six months, what does that mean for the clinic, and for you personally?"

+ 1 more, each with a line on why it matters

My test: the Discovery Coach prepped a first call with a dental clinic.

Stars, licence and dates: GitHub, 18 Oct 2026

COPY THIS · THE STAFFING AGENCY

Prep your *next sales call.*

YOUR PROMPT

HIRE 02

Use the Discovery Coach agent. Tomorrow I have a first call with **[type of client]** who says **[their problem]**. Give me 6 discovery questions in order, with one line on why each matters.

TIP Good first five: Discovery Coach, Proposal Strategist, Bookkeeper & Controller, Content Creator, Brand Guardian.

Plan it *before Claude builds it.*

HIRE 03 ✓ WE RAN IT

TRY IT

THE PROJECT PLANNER

addyosmani/agent-skills

WORKS IN **Claude Code**

Makes Claude write the plan first: a spec, then a task list. Its idea-refine skill stress-tests a business idea into a one-page brief.

Why you'd care: Long projects stop drifting, and a half-baked idea gets tested before you spend money on it.

108,156 stars · MIT licence · 25 skills, 9 commands · Updated 13 Oct 2026

Watch out: Most of the pack is for software builders. Start with idea-refine.

MY TEST · 18 OCT

Trade Review Engine: $47/month for plumbers and electricians

RECOMMENDED DIRECTION

Change the core promise from "we reply to your reviews" to "we get you more reviews, then reply to them."

THE OFFER IN ONE LINE

"Text us your customer's number after each job. We ask for the review, answer every review, and post your work every week. $47 a month, cancel anytime."

My test: a $47-a-month idea for tradespeople. It changed the promise and listed what to prove first.

Stars, licence and dates: GitHub, 18 Oct 2026

COPY THIS · THE PROJECT PLANNER

Test the idea *before you build it.*

YOUR PROMPT

HIRE 03

```
Use the idea-refine skill. My idea: [what you'd
sell, to whom, at what price]. Stress-test it and
give me a one-page brief: the problem, the best
direction, and what I must prove first.
```

TIP Ready to build it? /spec turns the brief into a plan (it asks some technical questions).

101,000 stars. *Switch off tracking first.*

HIRE 04 NOT TESTED

WAIT

THE MEMORY

`thedotmack/claude-mem`

WORKS IN **Claude Code**

Watches your Claude Code sessions, has AI write notes about them, and feeds those notes back later so Claude remembers past work.

Why you'd care: Claude stops forgetting what you did last week.

101,599 stars · Apache licence · Updated 18 Oct 2026

Watch out: If you install it, set DO_NOT_TRACK=1 on your computer first.

WHY I'D WAIT

- Sends anonymous usage data by default
- Runs in the background, watching every step
- Each memory uses your plan, or a $30-a-month cloud
- Changes almost daily: 26 releases in 30 days

Why I didn't install it on this PC.

Stars, licence and dates: GitHub, 18 Oct 2026

COPY THIS · THE MEMORY

If you install it, *do this first.*

YOUR PROMPT

HIRE 04

```
Before I install claude-mem: set the Windows user
environment variable DO_NOT_TRACK to 1, then show
me it is set. After the install, run npx claude-
mem telemetry status and show me tracking is off.
```

TIP Paste this into Claude Code. It will ask before changing anything.

What people said *this month, with receipts.*

HIRE 05 ✓ WE RAN IT

USE TODAY

THE RESEARCHER

`mvanhorn/last30days-skill`

WORKS IN **Claude Code + claude.ai**

Give it a topic. It reads what people said on Reddit, YouTube, Hacker News and more in the last 30 days, and writes a brief with links.

Why you'd care: Hear what your customers complain about before you write an ad, an offer or a video.

64,657 stars · MIT licence · No tracking · Updated 18 Oct 2026

Watch out: X needs a paid developer account, or a Firefox login on Windows.

MY TEST · 18 OCT

KEY PATTERNS

1 Seats-plus-credits pricing is live for new customers outside the US only; US list prices unchanged so far (r/hubspot)

2 The pain point is the jump from free to Professional, where automation lives (r/CRMSoftware)

+ more patterns, every one with its link

IT READ **Reddit 17 threads · YouTube 1 video · HN 1 story · GitHub 7 items · Web 5 pages**

My test today: what small businesses say about HubSpot pricing. 17 Reddit threads plus web pages, every point linked.

Stars, licence and dates: GitHub, 18 Oct 2026

COPY THIS · THE RESEARCHER

Know what they're saying *before you write.*

YOUR PROMPT

HIRE 05

```
/last30days what [your customers, e.g. small gym owners] are saying about [the problem you solve].
Give me the top 5 complaints, each with a link.
```

TIP Turn the top complaint into your next headline.

Your process, *drawn in one prompt.*

HIRE 06 ✓ WE RAN IT

USE TODAY

THE PROCESS MAPPER

`cathrynlavery/diagram-design`

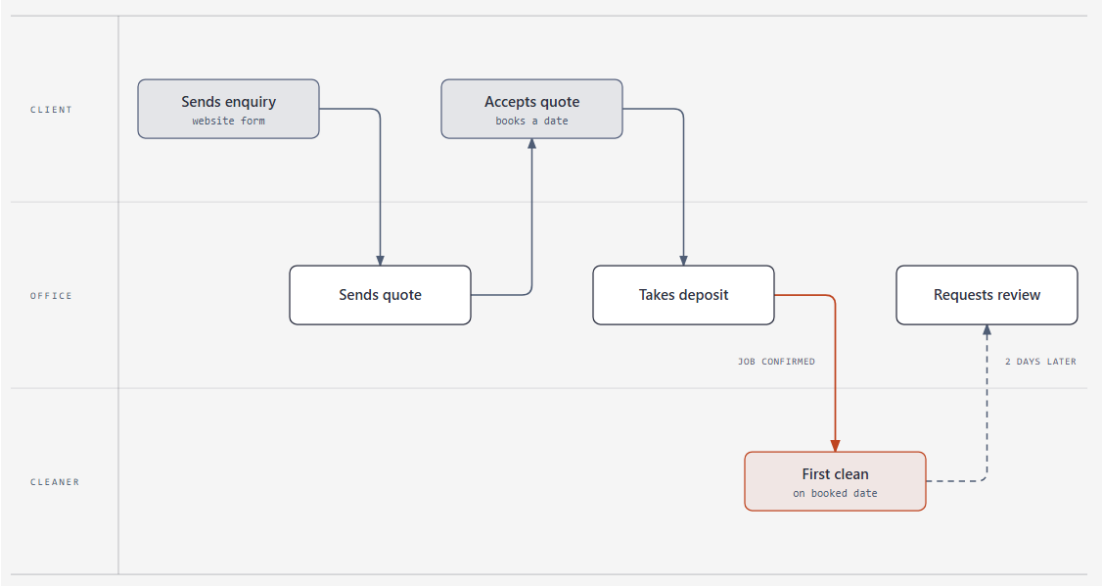

WORKS IN **Claude Code**

Describe how something works in your business. It draws a clean diagram as one web page.

Why you'd care: Map client onboarding once, then hand it to your team, a VA or an automation.

57,606 stars · MIT licence · 45 diagram types · No accounts, no tracking

MY TEST · 18 OCT

My test today: a cleaning company's client onboarding, from one prompt.

Stars, licence and dates: GitHub, 18 Oct 2026

COPY THIS · THE PROCESS MAPPER

Map *your* onboarding.

YOUR PROMPT

HIRE 06

Use the diagram-design skill. Draw a swimlane diagram of how my business onboards a new client. Lanes: **[Client]**, **[Me or my office]**, **[My team]**. Steps: **[list each step in order]**. Light theme, system fonts. Save it as onboarding.html.

TIP Swap "onboards a new client" for sales calls, refunds or hiring.

Claude tests your site *like a customer.*

HIRE 07 ✓ WE RAN IT TRY IT

THE MYSTERY SHOPPER

`microsoft/playwright-cli`

WORKS IN **Claude Code**

Claude opens your website in a real browser, clicks through it like a visitor, and reports what it found, with screenshots.

Why you'd care: Check your booking page or funnel before a launch, without clicking every button yourself.

14,338 stars · Apache licence · Made by Microsoft · Updated 14 Oct 2026

Watch out: Needs a free program (Node.js) and one typed command.

MY TEST · 11 OCT

My test (11 Oct): Claude opened my own comparison site, took this screenshot and listed its links and buttons.

Stars, licence and dates: GitHub, 18 Oct 2026

COPY THIS · THE MYSTERY SHOPPER

Shop your own site *before customers do.*

YOUR PROMPT

HIRE 07

Use playwright-cli to open **[your booking page URL]** like a first-time customer. Try to book a **[service]**, but stop before the final Book or Pay button. Screenshot every step and list anything confusing or broken.

TIP Watch it happen: ask Claude to run it with the browser visible.

What your Claude Code use *would cost without a plan.*

HIRE 08 ✓ WE RAN IT

USE TODAY

THE METER READER

getagentseal/codeburn

WORKS IN **Claude Code**

Reads Claude Code's own log files and shows what your use would cost at pay-as-you-go prices.

Why you'd care: See which projects use the most of your plan.

11,506 stars · MIT licence · Has a Claude Max plan view · Updated 17 Oct 2026

Watch out: Needs Node.js (free) or its desktop app. The app reports anonymous usage by default in the US: switch it off.

My PC, 1 to 18 Oct: what my Claude Code use would cost at pay-as-you-go prices (codeburn's estimate). Mine is heavy use. Yours will be much lower.

Stars, licence and dates: GitHub, 18 Oct 2026

COPY THIS · THE METER READER

Ask Claude *to read the meter.*

YOUR PROMPT

HIRE 08

```
Run npx codeburn, then explain in plain English
what my Claude Code use this month would have
cost at pay-as-you-go prices, and which of my
projects used the most.
```

TIP Paste this into Claude Code. It will ask before running the command.

An ads audit that *only reads your ads.*

HIRE 09 NOT TESTED

TRY IT

THE ADS AUDITOR

AgriciDaniel/claude-ads

WORKS IN Claude Code

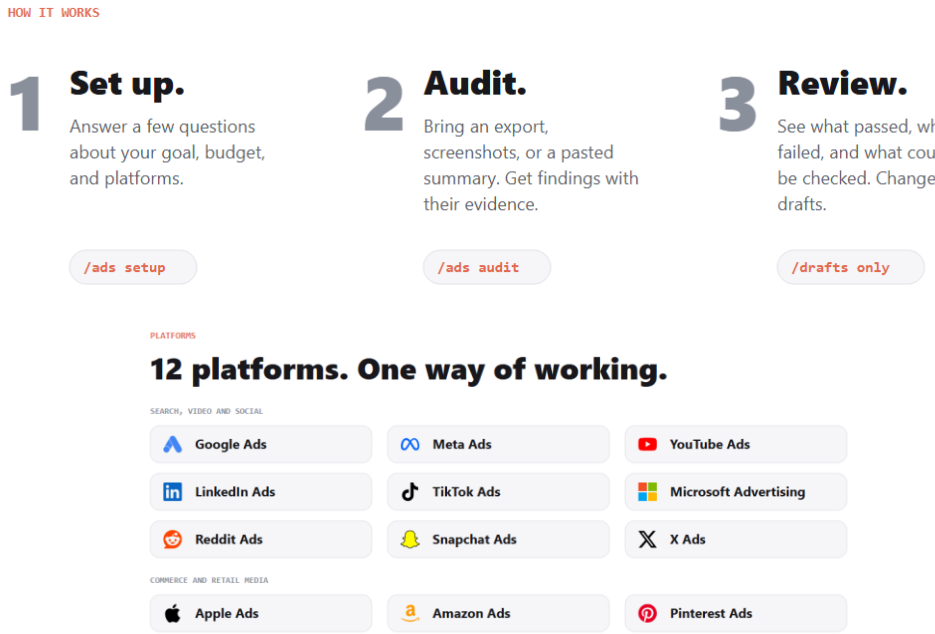

Give it your ad exports or screenshots. It tells you what's working, what's broken and what to fix first.

Why you'd care: A second pair of eyes on your ad spend, across 12 ad platforms.

10,104 stars · MIT licence · 12 ad platforms · Updated 17 Oct 2026

Watch out: Needs Python installed first. Read-only today: every account-change switch in its code is off.

FROM THE REPO

From the repo: how an audit runs.

Stars, licence and dates: GitHub, 18 Oct 2026

COPY THIS · THE ADS AUDITOR

Your top five fixes, *in order.*

YOUR PROMPT

HIRE 09

/ads audit meta. Here is my Meta Ads export for the last 30 days: **[attach the export file]**. My goal is **[leads under $X each]**. Tell me the 5 fixes that matter most, in order, and what each one should change.

TIP Run /ads setup once first. Never paste passwords or secret keys.

Small, *but brilliant.*

HIRE 10 ✓ WE RAN IT USE TODAY

THE PLAIN-TALKER

alexgreensh/attention-span

WORKS IN Claude Code + claude.ai

Makes Claude answer first, keep it short and bold the key words.

Why you'd care: You stop scrolling through walls of text to find the one thing to do.

1,469 stars · AGPL licence: fine for your own use · Updated 12 Oct 2026

Watch out: Don't bundle it into something you sell (licence).

FROM THE REPO

~~430 words~~ → 94 words

Default · 430 words	Attention-kind · 94 words
For a new social app, start with PostgreSQL, and the bar for choosing MongoDB instead is high. Social apps are relationship-heavy by nature: users follow users, posts belong to users, comments belong to posts, likes connect users to posts. That's a web of connections, exactly what a relational database is built for. In MongoDB you either cram related data into one record and fight size limits, or split it out and end up stitching it back together in your app code anyway. The feed problem makes this worse: timelines, "posts from people you follow," and mutual-friend lookups all lean on the kind of cross-referencing Postgres does in a single query. You also get consistency for free, since follow counts and "did I already like this" checks want real transactions... *[and it keeps going like this]*	→ **Use PostgreSQL.** A social app is all relationships (friends, follows, likes), and Postgres handles those natively. Right for ~90% of new social apps. → **You keep flexibility.** Its JSONB column stores schema-less data inside the same database, so you get MongoDB's looseness without leaving Postgres. → **Pick MongoDB only if** your data is self-contained documents with no links, and you need massive write volume on day one. → **The early trap with MongoDB:** six months in, five different shapes of "user" and no clean fix. Postgres forces the structure. → **Next:** start on managed Postgres (Supabase, Neon, RDS).

The repo's own example: same answer, before and after.

Stars, licence and dates: GitHub, 18 Oct 2026

COPY THIS · THE PLAIN-TALKER

Try it on *your own inbox.*

YOUR PROMPT

HIRE 10

```
/attention-kind I run [your business]. Here are
this week's emails and notes: [paste them]. Tell
me the 3 things I should do first, and why.
```

TIP Want it on all the time? Type /style attention-kind once.

THE TEAM, RANKED

Start with the top three. *Add one a week.*

KEY

✓ WE RAN IT

Ran it on my PC, Oct 2026

NOT TESTED

Read the code only

Install one at a time, so you know *which one helped.*

Rough idea in. *Strong prompt out.*

GIFT 1 OF 3
MADE BY ME

The prompt optimizer

The result

What should be true when it's done

The professional's methods

How the best person in that field would do it

The original material

The full data or transcript, not a summary

An outside check

A fresh chat, a tool or you checks the work, never the chat that did it

BEFORE Write a proposal for a website redesign for a dental clinic.

→

AFTER (SHORTENED) Outcome: the clinic owner says yes on our next call. ... Who checks it: a fresh chat reads it as the clinic owner and lists every objection; then me.

YOUR PROMPT

```
Improve this prompt: [paste your messy request]
```

Aim higher. *Go deeper. Go wider.*

GIFT 2 OF 3
MADE BY ME

The ambition booster

Built into the prompt optimizer for important jobs: three questions that turn a task into a result, done the professional's way.

Heads up: Uses more of your plan. Save it for big jobs.

Aim higher

Ask for the result, not the task

Go deeper

The professional's methods and the original source

Go wider

A team of specialists, plus two critics who only hunt for problems

YOUR PROMPT

```
Make this more ambitious: [your request]. Put together a
small team of specialists from different fields, plus two
critics who only hunt for weaknesses.
```

Use the plan *before it resets.*

GIFT 3 OF 3
MADE BY ME

The quota maximizer

Send it a screenshot of your usage page. It works out how much of your weekly plan is left, and spends the spare on your most valuable work before the reset.

Most useful on paid plans, which have weekly limits.

Spend now

Plenty left and the reset is close

Spend tomorrow

Line up your projects

Running hot

Slow down on the biggest model

Nothing to do

You're on pace

YOUR PROMPT

```
How much of my plan is left before it resets,
and what should I spend it on? [attach a
screenshot of your usage page]
```

HOW TO GET ALL THREE

One free install. *All of it.*

THE REPO

`github.com/AutomatedMarketer/claude-leverage-kit`
